

# Resets

Resets in horizontal utilize the same cuts as in vert, with the main difference being that with 3 handlers, you get two reset options that will typically set up on either side of the thrower when the disc is toward the middle of the field. A typical reset sequence is illustrated below.

When the disc is on the sideline, there is inherently less space to work with and you lose the ability to have cuts come from both sides of the disc as well as the ability to make horizontal jam cuts. Handlers should still attempt to give throwers two options by making train tracks cuts one after another sequentially while doing their best to not cut each other off.
